

IN THE CLAIMS:

1. (Currently Amended) A system for providing an adaptive Electronic Program Guide (EPG) presentation for use with a receiver for displaying programs from a plurality of program sources on a plurality of user-selectable channels comprising:

an EPG presentation generator for generating a displayable EPG presentation;

~~a signal filter~~; and

~~an EPG morphing engine~~ a user selection means for modifying a visual display of the EPG presentation data characteristics based on a user control command ~~generated by the signal filter.~~

2. (Original) The system according to claim 1, wherein the EPG presentation can be displayed as a three-dimensionally arranged set of three-dimensional surfaces textured by specially pre-processed scheduling data.

3. (Currently Amended) The system according to claim 1, ~~wherein the further comprising a~~ morphing engine ~~comprises including~~ a database of different EPG presentation solutions, and based on a control command generated by ~~the~~ a signal filter, one of said solutions is selected from said database for display.

4. (Currently Amended) The system according to claim 3 4, wherein the morphing engine comprises a set of parametrical functions, and a control command generated by the signal filter creates a request for a specific function and its parameters.

5. (Original) The system according to claim 3, wherein the morphing engine comprises a mix of presentation solutions and functions, and a control command generated by the signal filter creates a request for one of said solutions.

6. (Original) The system according to claim 3, wherein the morphing engine comprises a mix of presentation solutions and functions, and a control command generated by the signal filter creates a request for a specific function and its parameters.

7. (Currently Amended) The system according to claim 1, ~~wherein~~ further comprising a ~~the~~ signal filter that is based on an input provided by a user.

8. (Currently Amended) The system according to claim 1, ~~wherein~~ further comprising a ~~the~~ signal filter that is based on a signal from a broadcaster.

9. (Original) The system according to claim 7, wherein the input provided by the user is a request for the use of a different font type and/or the use of a different font size.

10. (Currently Amended) A method for selectively modifying an EPG presentation comprising:

generating a ~~displayable~~ display of an EPG presentation; and
selectively modifying a visual display of the EPG presentation data based on a control command generated by a user ~~signal filter~~.
